Art Unit: 1641

DETAILED ACTION

Status of the claims

The amendment filed May 27, 2004 is acknowledged and has been entered.

Applicant's amendments to the claims have necessitated the following restrictions.

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - Claims 1-7, drawn to a method for detecting biomolecules, classified in class 435, subclass 7.2.
 - II. Claims 8-17, drawn to a circuit for detecting biomolecules, classified in class 422, subclass 82.07.
 - III. Claim 23, drawn to a system for detecting biomolecules, classified in class 435, subclass 288.7.
 - IV. Claims 24-28, drawn to an implantable apparatus, classified in class 600, subclass 329.
- 2. Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus as claimed can be used to practice another and materially different process such as a process for light scattering assays.
- 3. Inventions I and III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be

Art Unit: 1641

practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus as claimed can be used to practice another and materially different process such as a process for light scattering assays.

- 4. Inventions I and IV are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus as claimed can be used to practice another and materially different process such as drug delivery or the process as claimed can be practiced by another materially different apparatus such as the apparatus of Invention III.
- 5. Inventions II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination as claimed does not require the specifics of a processor circuit as recited in Group II. The subcombination has separate utility such as barcode reading or spectrophotometry.
- 6. Inventions II and IV are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed

Art Unit: 1641

does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination as claimed does not require the specific circuit as claimed for patentability. The subcombination has separate utility such as barcode reading or spectrophotometry.

7. Inventions III and IV are independent and distinct inventions. Invention IV requires a processor circuit, coupled to the optical radiation source and the optical radiation detector and Invention III does not require this limitation. Invention III requires a means for emitting a first optical radiation into a tissue and Invention IV does not require this limitation.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the search required for one group is not required for other restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gary W. Counts whose telephone number is (571) 2720817. The examiner can normally be reached on M-F 8:00 - 4:30.

Application/Control Number: 10/005,889
